SAUERBURGER

SAUERBURGER FLAIL TOPPER WITH COLLECTOR

Specially designed by SAUERBURGER for paddocks, sport fields and anywhere where the grass cuttings need to be collected. These areas can be kept free of old grass, horse dung, thorns, weeds and any other unwanted vegetation, keeping a clean and tidy landscape. Depending on the size and power of the tractor, SAUERBURGER offers 2 types of machine. MOSKITO for lighter tractors with a power class from 30 PS and the heavy duty WM that is suited to tractors with power class from 50 PS.

SPECIAL FEATURES

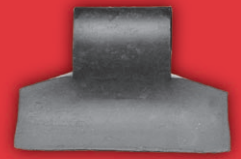

The main rotor is fitted with forged wide flails. These flails create a strong vacuum effect ensuring the unwanted vegetation is sucked into the machine. Even horse manure will be sucked up along with the cut grass and then is deposited in the collector. The machines are delivered with a side shift as standard to enable cutting outside of the tractor tracks.

The parasite's that are in the horse manure, which often cause illness in the animals, are collected and removed by the machine. Through the usage of a control flap in the machine you can distribute the cut grass back on to the paddock. It is also possible to empty the collector from the tractor.

ADJUSTABLE CUTTING HEIGHT

The cutting height is controlled through the large diameter (MOSKITO 168mm / WM 219mm) adjustable running roller. The roller also ensures the machine runs true to the ground. Fine adjustments can be carried out through the center linkage. The close proximity of the roller to the main rotor ensures the roller is kept clean of sticky earth and grass by the flails. The running roller also minimizes contact between the flails and the ground, reducing the wear on the flails.

TOOLS

Wear resistant flail
